

What Model Does:

Inputs:

→ Dataset Set Path Variables

f"{} Path{} / Ish - train

.. Ish - test

→ Make test and train data transformations. Purpose it to have consistent and easy to convert to tensor data

→ Imagefolder assign each subclass a numeric value based in alphabetic order

DishDectc/

train /

Ish/
Naiger/

test /

Ish/
Naiger/

then makes a list of Image - Value pairs where the value is the numeric value (Label). Also applies transformation Pipeline.

Transformation Pipeline
